

Title: Secure Network copy using Scp from remote server to local system and vice versa

A. Copy remote file from remote server to local system

Command: – scp alish@100.95.90.85:/home/alish/test/data.txt /home/alish/centos/lab34

```
alish@alish:~$ scp alish@100.95.90.85:/home/alish/test/data.txt /home/alish/centos/lab34
alish@100.95.90.85's password:
data.txt                               100%  61    1.8KB/s   00:00
alish@alish:~$ ls ~/centos/lab34
data.txt
alish@alish:~$ cat ~/centos/lab34/data.txt
hi my name is alish and i am talking to you from future.....
alish@alish:~$
```

B. Copy local file from local system to remote server

Command: – scp /home/alish/centos/lab34/alish.txt alish@100.95.90.85:/home/alish/test/

```
alish@alish:~/centos/lab34$ scp /home/alish/centos/lab34/alish.txt alish@100.95.90.85:/home/alish/test
alish@100.95.90.85's password:
alish.txt                               100%  67    4.5KB/s   00:00
alish@alish:~/centos/lab34$
```

Command – Go to the server and check whether the file is copied or not

– ls /home/alish/test

– you must see a file “alish.txt”

```
alish@localhost:~$ ls /home/alish/test/
alish.txt  data.txt
alish@localhost:~$ cat /home/alish/test/alish.txt
hi alish from server, i'm alish from localhost nice to meet you!!!
alish@localhost:~$
```
